

Sealing Bellows

Abstract

The present invention pertains to a sealing bellows of a ball-and-socket joint, with a ball, a pivot 6 originating from the ball and a housing accommodating the ball, the sealing bellows extending 5 between the pivot 6 and the ball housing and the sealing bellows having a pivot-side sealing area 12, a jacket area 13 and a housing-side sealing area and consisting of an elastomeric material.

The present invention is characterized in that at least one sealing area 12 consists of an elastomeric material different from that of the jacket area 13.
